

ImageTool for Projects

Document Management Professional Series

From planning to completion, managing project documentation is a critical component to the success of any project.

ImageTool™ for Projects

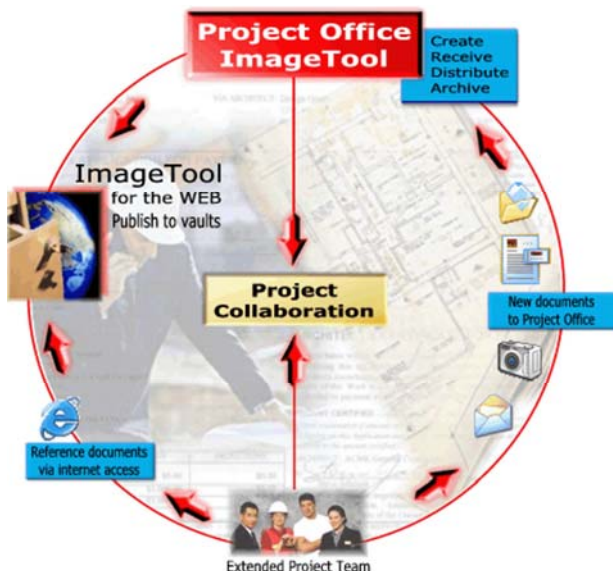

Any project, regardless of size and scope has associated documentation that needs to be referenced, reviewed, approved, tracked and archived. ImageTool for Projects is specifically designed for A/E/C companies to help them manage project documentation and maintain compliance with industry requirements. ImageTool Projects will significantly increase the productivity of any project environment.

With ImageTool Projects, scanned and electronic documents can be accessed across the project team or an entire organization. Users can search and retrieve documents by entering any combination of document attributes or performing a keyword search for words contained within the document.

In order to expedite project documents throughout the organization, ImageTool statuses documents for data required and ball-in-court approvals, and utilizes your email for task notification.

ImageTool Projects will directly integrate with Primavera software, Microsoft Office/Outlook, and other leading project management software.

Most project management applications do not offer scanning and archiving capabilities. By implementing ImageTool with your project management software, you will have a complete solution to manage all of your project documentation.

Benefits & Features

- Immediately access critical information
- Secure project documentation
- Eliminate redundant copies
- Share information with project members in seconds
- Mobile File Cabinet
- Increase productivity
- Reduce expenses
- Ease of use
- Enhance claims avoidance procedures
- Permanently store and archive project documents on CD with Project Closeout Wizard
