

LoadSpring's CAM Console™

CAM Console running on a PDA

Our Collaborative Application Management (CAM) Console

LoadSpring's Collaborative Application Management (CAM) Console exceeds the needs of construction business communities, enabling application access and information management from any computing device capable of connecting to the Internet, and exploiting the powerful business-to-business sharing capabilities the Internet provides.

CAM Console Benefits

- Decrease traveling, shipping, and out of the office expenses
- Conduct real-time - on line design reviews using full featured off the shelf applications
- Improve project management, scheduling, and application and data sharing
- Store critical files in a secure, highly available, off-site location
- Access applications and data from anywhere, anytime, on any device
- Bring your products to market faster

CAM Console Features:

- **File Management** - Securely upload and download application data files
- **Messaging and Calendaring** - For communication and scheduling between collaboration partners
- **Seamless Application Launcher** - Enables software launching in a seamless (separate) window through the Internet on the client device
- **Seamless Application Sharing** - Enables two or more business partners to share the same application view, and change application data in real-time
- **Project Management** - Enables real-time access to project status including product submissions, milestones and target dates for completion
- **Unified User Management** - Customer control of user permissions, applications and data access

CAM Console Interface

"Hosting Primavera Expedition and P3 across the Internet would have never happened if it wasn't for LoadSpring," said a prominent Project Controls Analyst in the Northeast. "LoadSpring provided us with a simple way to access our software remotely – from the office, home, or when traveling."
